

Container Planting Tip:

THE BULLSEYE APPROACH

-  **Tier I:** The center of your container. This will be your tallest plant ranging from 3-4ft tall. Max height should be 1-2x the height of the container. Try an evergreen perennial.
-  **Tier II:** Your mid tier will support and balance Tier I. Pick plants that will grow 2ft tall and wide to fill-in. You'll want 4-5 plants here. Get creative but match the plants' water/light needs.
-  **Tier III:** Your spillers. Choose plants that will cascade over the container rim. Use 5-7 plants in this tier.
